BLAIM Themes × Police Internship: 50 Problem Statements

The 13 police internship areas are mapped into the 5 BLAIM themes, followed by 50 industry-relevant problem statements (10 per theme). The number in brackets at the end of each statement is the internship area it belongs to.

Step 1: Mapping the 13 areas into 5 themes

BLAIM theme	Police internship areas that fit
B: Behaviour, Health & Well-being	#9 Police personnel mental health, #11 Behavioural studies on police work
L: Law, Leadership & Justice	#1 Crime data analysis, #2 Public safety & crime prevention, #7 Policy research & administrative reforms, #13 Prison & correctional reform
AI: AI, Algorithms & Accountability	#4 AI & analytics for policing, #5 Cybercrime & digital investigation, #6 Technology & digital platforms in policing
I: Inclusion, Innovation & Impact	#3 Traffic management & road safety, #8 Documentation, digitization & process improvement, #10 Community policing & citizen participation
M: Media, Mindfulness & Meaningful Futures	#12 Any other police-related field (public communication, media literacy, digital well-being, youth outreach)

Step 2: 50 problem statements

B: Behaviour, Health & Well-being

1. Predicting stress and burnout in police personnel from duty-roster and shift patterns (#9)
2. Developing an anonymous AI-assisted mental health check-in app for police staff (#9)
3. Measuring the impact of long duty hours on decision-making and use of force (#11)
4. Designing a peer-support and counselling model for officers after traumatic incidents (#9)

5. Analysing behavioural patterns of citizens who interact with police during crisis calls (#11)
6. Studying the link between workplace culture and misconduct complaints (#11)
7. Building a sleep, fatigue and wellness tracker for night-shift officers (#9)
8. Designing emotional-intelligence and de-escalation training modules for frontline police (#11)
9. Studying the effect of digital lifestyle and social media use on officer well-being (#9)
10. Developing a behavioural-pattern model for early signs of addiction or mental distress among at-risk youth, for use by community police (#11)

L: Law, Leadership & Justice

11. Hotspot mapping and crime-trend analysis using historical FIR data (#1)
12. Predicting crime seasonality and repeat-offender patterns using ML (#1)
13. Studying the effectiveness of crime prevention programs in urban vs rural areas (#2)
14. Analysing delays in FIR registration and chargesheet filing, and proposing reforms (#7)
15. Evaluating the gaps between legal frameworks and on-ground police procedure, such as the BNS/BNSS transition (#7)
16. Predicting the risk of repeat offending among prisoners to support rehabilitation planning (#13)
17. Digitising prison records and inmate case tracking to reduce overcrowding (#13)
18. Studying youth participation in governance and law-awareness through police outreach (#2)
19. Mapping crimes against women and child safety zones for preventive deployment (#2)
20. Developing a transparent dashboard for tracking case status and administrative reform KPIs (#7)

AI: AI, Algorithms & Accountability

21. Bias-audit framework for AI-based predictive policing tools (#4)
22. Explainable AI system for crime-pattern prediction that officers can trust (#4)
23. Facial recognition accuracy and privacy safeguards in public surveillance (#6)
24. NLP system to auto-summarise FIRs and case diaries (#4)
25. AI-based detection of online financial fraud and UPI scam patterns (#5)
26. Deepfake and synthetic-media detection for investigation teams (#5)
27. Digital forensics workflow for tracing cyber-crime evidence across platforms (#5)
28. Chatbot for citizens to file complaints and track cases in regional languages (#6)
29. Governance model and audit trail for police use of CCTV and ANPR data (#6)

30. Detection of cyberbullying, online radicalisation and child-exploitation content using responsible AI (#5)

I: Inclusion, Innovation & Impact

31. AI-based traffic signal optimisation to reduce congestion at junctions (#3)
32. Accident black-spot identification and road safety prediction using geospatial data (#3)
33. Automated e-challan system with fairness and error-correction checks (#3)
34. OCR and digitisation of handwritten police records and registers (#8)
35. Workflow automation to cut paperwork time in police stations (#8)
36. Citizen-police feedback platform for community policing (#10)
37. Safe-city app with SOS, live location sharing and volunteer response networks (#10)
38. Accessible complaint-filing system for women, differently-abled and rural citizens (#10)
39. Youth volunteer program (student police cadets) with measurable impact tracking (#10)
40. Low-cost technology toolkit for under-resourced rural police stations (#8)

M: Media, Mindfulness & Meaningful Futures

41. Media-literacy campaign to counter fake news and rumours that trigger public disorder (#12)
42. Real-time misinformation tracking on social media during communal tension (#12)
43. Social-media outreach strategy for police to build public trust among youth (#12)
44. Digital well-being and screen-addiction awareness program run with schools (#12)
45. Cyber-hygiene education for students, parents and senior citizens (#12)
46. Mindfulness and resilience training program for police and youth volunteers (#12)
47. Study of how crime is portrayed in digital media and its effect on public fear (#12)
48. Anti-drug awareness campaign designed around youth culture and influencers (#12)
49. Gamified road-safety and law-awareness platform for young people (#12)
50. Sustainable, future-ready policing: a vision model for smart, tech-enabled and citizen-centric police by 2035 (#12)

Step 3: Detailed write-ups by theme

Each row below expands the matching problem statement above with a practical approach, tech stack and expected impact, so it can go straight into a proposal.

B: Behaviour, Health & Well-being

#	Problem statement	Approach and tech stack	Expected impact
1	Predict stress and burnout from duty-roster and shift patterns	Anonymised roster, leave and overtime data; gradient-boosting risk classifier; Python, scikit-learn, XGBoost, Power BI	Early warning for supervisors; fewer sick days
2	Anonymous AI-assisted mental health check-in app for police staff	Short weekly mood survey with an empathetic chatbot and escalation to a counsellor; Flutter or React, Firebase, an LLM API	Confidential, stigma-free access to support
3	Impact of long duty hours on decision-making and use of force	Compare incident reports against hours worked; regression and statistical testing; Python, pandas, statsmodels	Evidence for fair shift limits
4	Peer-support and counselling model after traumatic incidents	Literature review, officer interviews, a trained peer-responder protocol; mixed-methods study	Structured post-incident care framework
5	Behavioural patterns of citizens in crisis calls	Analyse call logs and transcripts; topic modelling and sentiment analysis; NLP in Python	Better call-handling scripts and triage
6	Workplace culture and misconduct complaints	Survey plus complaint-data correlation; factor analysis; SPSS or Python	Identifies culture drivers behind complaints
7	Sleep, fatigue and wellness tracker for night-shift officers	Wearable or self-report data with a fatigue score and shift-swap suggestions; mobile app, simple ML	Safer night duty, fewer fatigue errors

#	Problem statement	Approach and tech stack	Expected impact
8	Emotional-intelligence and de-escalation training modules	Scenario-based micro-modules with role-play videos and quizzes; LMS or Moodle, pre/post assessment	Measurable drop in escalated confrontations
9	Digital lifestyle and social media effect on officer well-being	Validated well-being scales plus screen-time self-reports; correlation analysis; Google Forms, Python	Guidelines for healthy digital habits
10	Early signs of addiction or distress among at-risk youth, for community police	Risk-indicator checklist built with psychologists, referral pathway to NGOs; privacy-first design, dashboard	Early referral instead of arrest

L: Law, Leadership & Justice

#	Problem statement	Approach and tech stack	Expected impact
11	Hotspot mapping and crime-trend analysis from FIR data	Geocode FIRs, kernel density and DBSCAN clustering, time-series trends; Python, GeoPandas, Folium, QGIS	Smarter patrol allocation
12	Crime seasonality and repeat-offender prediction	Seasonal decomposition plus Random Forest or LSTM on historical records; Python, scikit-learn, Prophet	Forecasts for monthly and festival-season planning
13	Effectiveness of crime prevention programs, urban vs rural	Before/after and difference-in-differences analysis across districts; pandas, statsmodels	Evidence on which programs to scale
14	Delays in FIR registration and chargesheet filing	Process-mining of case timelines to find bottlenecks; Python, PM4Py, dashboards	Reform recommendations to cut delay

#	Problem statement	Approach and tech stack	Expected impact
15	Gaps between legal frameworks and on-ground procedure (BNS/BNSS transition)	Compare old and new provisions with station-level practice; interviews, checklist, gap matrix	Clear SOP updates and training needs
16	Repeat-offending risk among prisoners	Risk-scoring model on anonymised inmate records, with fairness checks; scikit-learn, SHAP	Better rehabilitation planning
17	Digitise prison records and inmate case tracking	Central inmate database with hearing-date alerts; PostgreSQL, Django or FastAPI, role-based access	Faster case follow-up, less overcrowding
18	Youth participation in governance through police outreach	Survey of participation levels and design of a youth outreach model; mixed methods	Higher civic engagement and trust
19	Crimes against women and child-safety zone mapping	Map incident density against lighting, transport and footfall data; GIS, QGIS, Python	Preventive deployment in high-risk zones
20	Transparent dashboard for case status and reform KPIs	KPI definitions such as disposal time and pendency; Power BI or Streamlit with a SQL backend	Leadership accountability and public transparency

AI: AI, Algorithms & Accountability

#	Problem statement	Approach and tech stack	Expected impact
21	Bias-audit framework for predictive policing tools	Fairness metrics such as demographic parity and equalised odds across groups; Fairlearn, AIF360, audit checklist	Accountable, defensible use of AI

#	Problem statement	Approach and tech stack	Expected impact
22	Explainable AI for crime-pattern prediction	Tree-based model with SHAP explanations shown in an officer-friendly UI; Python, SHAP, Streamlit	Officers can trust and question predictions
23	Facial recognition accuracy and privacy safeguards	Benchmark accuracy across demographics; design consent, retention and access rules; OpenCV, DeepFace, policy brief	Lower false matches, privacy compliance
24	NLP system to auto-summarise FIRs and case diaries	Fine-tuned or prompted LLM with Hindi, Gujarati and English support; Hugging Face, LangChain, OCR for scans	Hours saved per case, consistent summaries
25	Detection of online financial fraud and UPI scam patterns	Anomaly detection and graph analysis of transaction and complaint data; Isolation Forest, XGBoost, Neo4j	Faster freezing of fraud accounts
26	Deepfake and synthetic-media detection	CNN or transformer detectors on video, audio and image; PyTorch, public datasets such as FaceForensics++	Reliable evidence screening for investigators
27	Digital forensics workflow for cross-platform cyber-crime evidence	Standard chain-of-custody workflow with hashing and timeline reconstruction; Autopsy, Python, SQLite	Court-ready evidence handling
28	Regional-language chatbot for complaints and case tracking	Intent classification, form filling and status lookup; Rasa or an LLM, WhatsApp Business API, speech input	24x7 access, shorter queues at stations
29	Governance model and audit trail for CCTV and ANPR data	Access logging, retention limits and review policy; blockchain-style tamper-evident logs, policy framework	Prevents misuse of surveillance data

#	Problem statement	Approach and tech stack	Expected impact
30	Responsible AI for cyberbullying, radicalisation and child-exploitation content	Text and image classifiers with human review and strict data handling; transformers, hash-matching	Faster takedown requests with fewer false flags

I: Inclusion, Innovation & Impact

#	Problem statement	Approach and tech stack	Expected impact
31	AI traffic signal optimisation at junctions	Vehicle counting from camera feeds and adaptive signal timing; YOLO, OpenCV, SUMO simulation	Shorter waiting times, lower emissions
32	Accident black-spot identification and road-safety prediction	Cluster accident locations and model risk factors such as road type, time and weather; GeoPandas, scikit-learn, Folium	Targeted engineering fixes and patrols
33	Automated e-challan with fairness and error-correction checks	ANPR plus rule engine with human review and an easy appeal flow; OpenCV, OCR, Django	Fewer wrongful challans, higher compliance
34	OCR and digitisation of handwritten police records	Handwriting OCR with field extraction into a searchable database; Tesseract, TrOCR, PostgreSQL	Searchable legacy records, less manual typing
35	Workflow automation to cut station paperwork	Template-based form generation, auto-filled from one data entry; Python, python-docx, FastAPI	Measurable hours saved per officer per week
36	Citizen-police feedback platform for community policing	Anonymous ratings, sentiment analysis and station-wise scorecards; React, Node.js, MongoDB	Trust-building and service improvement

#	Problem statement	Approach and tech stack	Expected impact
37	Safe-city app with SOS, live location and volunteer network	One-tap SOS, trusted contacts, nearest-responder alerts; Flutter, Firebase, Google Maps API	Faster response in emergencies
38	Accessible complaint-filing for women, differently-abled and rural citizens	Voice, regional-language and low-bandwidth channels with screen-reader support; WhatsApp, IVR, WCAG-compliant web	Inclusive access to justice
39	Youth volunteer program (student police cadets) with impact tracking	Structured roles, training and a volunteer dashboard with hours and outcomes; web app, Power BI	Scalable youth engagement with proof of impact
40	Low-cost technology toolkit for rural police stations	Offline-first apps for FIR drafts, records and alerts on basic hardware; PWA, SQLite, open-source tools	Digital capability without heavy cost

M: Media, Mindfulness & Meaningful Futures

#	Problem statement	Approach and tech stack	Expected impact
41	Media-literacy campaign against fake news that triggers disorder	Short videos, posters and school sessions on spotting rumours; pre/post awareness survey	Fewer rumour-driven incidents
42	Real-time misinformation tracking during communal tension	Keyword and trend monitoring with claim classification and a human fact-check queue; NLP on public social data, Streamlit	Early alerts for rumour hotspots

#	Problem statement	Approach and tech stack	Expected impact
43	Social-media outreach strategy to build youth trust	Content calendar, tone guide and engagement metrics; analytics tools, A/B testing of posts	Higher reach and trust among young people
44	Digital well-being and screen-addiction awareness with schools	Workshops, parent guides and a simple screen-time self-check; survey tools	Healthier digital habits in students
45	Cyber-hygiene education for students, parents and senior citizens	Audience-specific modules on phishing, UPI safety and passwords; mobile-friendly micro-learning in regional languages	Fewer cyber-fraud victims
46	Mindfulness and resilience training for police and youth volunteers	Breathing, focus and stress-management sessions with a short validated scale before and after; workshop plus audio guides	Better calm under pressure
47	How digital media portrays crime and affects public fear	Content analysis of news and social posts with a fear-perception survey; text mining, Python	Guidance for responsible crime communication
48	Anti-drug awareness campaign built around youth culture	Influencer and peer-led storytelling with measurable reach; social media analytics, campus events	Stronger prevention messaging
49	Gamified road-safety and law-awareness platform	Quizzes, levels and badges tied to real rules; Unity or web game, leaderboard backend	Higher engagement than lectures
50	Vision model for future-ready, citizen-centric policing by 2035	Scenario planning and a roadmap built from the other 49 areas; foresight workshops, framework diagram	Long-term strategy for tech-enabled, trusted policing
